

A compact telephoto zoom lens that inherits the EF-M lens design and portability.

With design and portability characteristic of the EOS M series, you can easily enjoy the world of telephoto zoom lens shooting in a compact and lightweight body with the EF-M 55-200 f/4.5-6.3 IS STM. This EF-M lens features a built in Image Stabilizer so you can capture images from a distance in sharp, crisp quality and a built in stepping motor (STM) for silent and smooth AutoFocus. Used in combination with an EF-M standard lens, a wide range of shooting scenes can be covered with the EOS M series.

Key Features

- Compactness and precision image quality is achieved through a new type of 5-group zoom system making use of short back focus and aspheric lens
- Uses a UD lens to correct chromatic aberration for excellent image quality throughout the zoom range
- The focusing mechanism employs a stepping motor and lead screw to provide quiet and smooth movie servo AF for shooting movies
- Image Stabilizer equivalent to a shutter speed 3.5 settings faster
- Maintains the EF-M lens design concept of projecting from the mount in a straight form
- Lens disposition and coatings are optimized to minimize ghosting and flare
- Uses a 7-blade circular aperture for exquisite blurred areas
- Fast autofocus is achieved for still images using a rear focus system, high-speed CPU, and optimized AF algorithm

EF-M 55-200mm f/4.5-6.3 IS STM

EF-M Telephoto Zoom Lens

<i>Focal length</i>	55-200mm
<i>Max Aperture</i>	f/4.5-6.3
<i>Lens Construction</i>	17 elements in 11 groups
<i>Aperture Blades</i>	7
<i>Minimum Focusing Distance</i>	1.0m
<i>Maximum Magnification</i>	0.21x
<i>Dimensions</i>	60.9 x 86.5mm
<i>Weight</i>	Approx. 260g
<i>Included Accessories</i>	Lens cap E-52 II, Lens dust cap EB
